HOW LITTER REACHES THE OCEAN

Our actions on land can affect animals in the ocean.

1 It starts on the street.

Litter can be dropped without us thinking.

2 Rain washes it down the drain.

Stormwater carries litter along the gutter and into the drain.

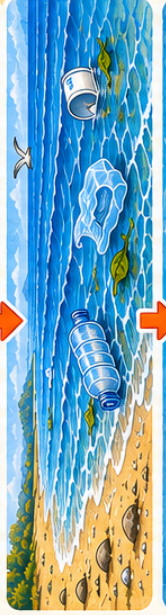

3 It flows into creeks and rivers.

The litter travels through pipes and into our local waterways.

4 It can end up in the ocean.

Litter moves with the water all the way to the sea.

5 Animals can mistake it for food.

This can make them sick or even hurt them.

6 Together we can keep our oceans clean!

Put litter in the bin and help protect our beautiful planet.

Even small items can cause big problems.

Our choices today can protect ocean animals tomorrow.

Be a Little Planet Helper every day!
